+91-930-441-1572 | shoaibakhtar.dev.eng@gmail.com | LinkedIn | GitHub | LeetCode

SKILLS

Languages: C#, TypeScript, JavaScript, SQL, Python, Java, C/C++

Technologies & Tools: Angular, React.js, Next.js, Tailwind CSS, ShadCN UI, .NET, ASP.NET Core, Entity Framework, Node.js, Express, FastAPI, BetterAuth, Kafka, RabbitMQ, RPC, Hangfire, Inngest, Modal, Prisma, Drizzle, Tanstack Query, SQL Server, PostgreSQL, MongoDB, Neon, Redis, AWS, Docker, Kubernetes, Git, JIRA, Polar.sh, OpenAI

WORK EXPERIENCE

Software Developer

December 2023 – Present

Brain Payroll

Ahmedabad, India

- Architected an AI-powered data migration pipeline enabling clients to upload Excel/CSV files with automatic cleaning, validation, and mapping, accelerating onboarding speed and data accuracy.
- Engineered a code generation service for the migration tool that generates and executes transformation code at runtime in isolated environments, reducing processing time from **60+** seconds to **10ms** while eliminating token costs.
- Developed an Excel Utility for dynamic data manipulation across **multiple** files and sheets using a code generation approach, ensuring complete data privacy and user-customized outputs based on natural language instructions.
- Implemented an AI conversational feature with intelligent tool-calling capabilities that performs complex system actions based on user instructions, enabling natural language automation across platform operations.
- Strengthened application security by implementing Role-Based Access Control (RBAC) on **70%+** of APIs and field-level encryption to safeguard sensitive payroll data without compromising performance.
- Improved global search performance by **98%** through API refactoring, query optimization, and enhanced database indexing for better scalability on large datasets.
- Technologies:** Angular, React, TypeScript, C#, .NET, ASP.NET Core, Web API, Entity Framework Core, Microservices, Kafka, RabbitMQ, Redis, SQL Server, PostgreSQL, MongoDB, Docker, Kubernetes, Azure, AWS, Git, GitHub Actions, Swagger, Hangfire, Ocelot, gRPC

EDUCATION

Parul University

November 2021 – April 2024

Bachelor of Technology in Computer Science and Engineering

CGPA: 8.06/10

- Relevant Coursework:** Object-Oriented Programming, Discrete Mathematics, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Data Mining, Cyber Security, Database Management Systems, Compiler Design

PROJECTS

Sentinell - AI Code Reviewer Platform | *Next.js 16, TypeScript, tRPC, PostgreSQL, Inngest, Vercel AI SDK*

2026

- Engineered an event-driven AI Code Review platform supporting GitHub and GitLab webhooks, utilizing a **3-stage** pipeline (Repository Profiling, Intelligent Triage, Deep Review) to act as a virtual Principal Engineer.
- Architected a scalable data access layer by wrapping tRPC calls within custom React hooks for seamless state management, alongside optimizing PostgreSQL performance with connection pooling and health checks.
- Ensured high reliability with Inngest's event bus for retrievable background executions and fortified platform security by encrypting API keys at rest using **AES-256-GCM** within isolated environments.

AI Music SaaS | *Next.js 15, React, Tailwind CSS, ShadCN UI, Python, FastAPI, PostgreSQL, AWS S3*

2025

- Engineered a full-stack AI music generation platform enabling users to create original songs from text prompts, lyrics, or musical styles using advanced AI models.
- Implemented a credit-based payment system with Polar, secure user authentication via BetterAuth, and scalable background task handling using Inngest and Modal for async processing.
- Delivered a modern responsive UI with Next.js **15** and ShadCN UI, supported by a Python/FastAPI backend coupled with Neon PostgreSQL and AWS S3 storage.

AI ATS Analyzer | *React.js, React Router v7, Puter.js, Tailwind CSS, Zustand, OpenAI GPT*

2025

- Built an AI-powered resume screening tool leveraging GPT models to match resumes against job descriptions, identify skill gaps, and provide actionable improvement suggestions.
- Designed a dynamic responsive UI with React.js and Tailwind CSS, featuring efficient client-side routing and Zustand for centralized state management.
- Simulated real-world ATS behavior to mirror recruiter screening logic, helping job seekers optimize resumes for automated filtering systems.
